The following is an examiner's statement of reasons for allowance: The prior art does not disclose a method or apparatus for generating or receiving, by a measurement system, a measurement model for a measurement area of a sample, said measurement model comprising measurement image information, reference measurement information representative of measurements to be made using the measurement model and edge information;

locating, by the measurement system, the measurement area of the sample by (i) locating a vicinity area that includes the measurement area of the sample by detecting a target and then displacing a scanning beam of a scanner from the target by a predefined displacement amount, and (ii) locating the measurement area of the sample within the vicinity area by applying image processing utilizing the measurement image information of the measurement model;

locating, by the measurement system, edges of structural features within the measurement area of the sample by searching in a proximity of reference edges defined in the edge information;

performing, by the measurement system, at least one measurement of the measurement area of the sample based on the located edges of the structural features and the reference measurement information included in the measurement model; and

either providing, by the measurement system, measurement result information to a user, or processing multiple detection signals received from a detector positioned to receive charged particles resulting from an interaction between the target measurement area of the sample and the scanning beam of charged particles and the detector is enabled to provide the multiple detection signals, based on the received charged particles, to the processor.
